

**2004 STATISTICAL  
COMPENDIUM  
on  
ALLIED CONTRIBUTIONS  
TO THE  
COMMON DEFENSE**

Covers Allied Contributions in 2003

Report Documentation Page			Form Approved OMB No. 0704-0188		
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

## STATISTICAL COMPENDIUM

---

This Statistical Compendium covers allied contributions made during calendar year 2003 and encompasses all of the data that was presented in the Annexes included in past years' Responsibility Sharing Reports. Please note that data provided in previous reports on nations' contributions to the War on Terrorism is now provided in a separate Report entitled *International Contributions to the War on Terrorism*. This Compendium is organized into five sections, as described below.

**A. Data Notes.** This section presents sources and notes pertaining to the data summarized in this Statistical Compendium.

**B. Country Summaries.** This section provides summary information for responsibility sharing contributions on a country-by-country basis.

Military forces measures shown in these tables reflect a country's share of total contributions relative to its share of ability to contribute. Thus, a ratio between 0.8 and 1.19 indicates that a country's contribution is roughly in balance with its ability to contribute. Generally speaking, the Department gives a nation credit for "substantial contributions" relative to its ability to contribute when it achieves a ratio of 1.2 or greater. Ratios below 0.8 indicate very low effort relative to ability to contribute.

*Note:* With the exception of cost sharing estimates, all dollar figures shown in the country summary charts are in 2003 dollars, using 2003 exchange rates. Cost sharing figures reflect 2002 contributions, and are calculated using 2002 dollars and exchange rates.

### **C. Selected Indicators.**

Data upon which many of the Compendium's assessments are based involve a comparison of a country's contributions relative to its ability to contribute. This section provides the data upon which this analysis is based. The analysis is conducted in three stages:

- A country's *contribution* is expressed as a share of the total contributions of all nations in the Compendium (e.g., share of total defense spending, share of personnel contributions to multinational peace operations). These data are presented in Tables C-2 through C-5.
- Similarly, a country's *ability to contribute* is expressed as a share of the total of all nations in the Compendium (i.e., share of total GDP, share of total labor force). These data are shown in Table C-1.
- By creating a ratio of the share of contribution divided by the share of ability to contribute, analysts can draw conclusions as to the extent and the equity of nations' efforts. These ratios are provided in Tables C-6 through C-9.

As with the military forces measures in Annex B, the same ranges for the ratios are used to determine whether a country's contribution is in balance with its ability to contribute, or whether it is substantially greater or less than its ability to contribute.

**D. Additional Statistics.** This section provides data values upon which many of the Selected Indicators are based. Most of the tables in this section also provide information such as

subtotals and shares. The subtotals and grand total in Tables D-2, and D-5 are actually weighted averages. For example, the raw data for defense spending is summed for each group of nations and then divided by the sum of GDP for the same group of nations. This provides a more accurate figure than calculating an average based on the percentages portrayed.

**E. Selected Tables and Graphs.** This section illustrates defense spending and cost sharing contributions in tabular and graphic form. Table E-1 measures our NATO and Pacific allies', and GCC partners' ability and willingness to commit resources to defense. Table E-2 provides an overview of defense spending trends over the past nine years. Tables E-3 through E-5 depict the extent to which our allies and partners offset the costs for U.S. forces stationed in their territory.

---

## ANNEX A

### DATA NOTES

---

The assessments presented in this Compendium are only as good as the data upon which they are based. The Department has every confidence that the data used for the assessments in this Compendium are as complete, current, and comprehensive as they can be. This Compendium covers allied contributions made during calendar year 2003.

#### **Data Sources**

Defense spending data have been obtained from a variety of sources. NATO's 1 December 2003 Press Release: *Financial and Economic Data Relating to NATO Defence* (available on NATO's website at <http://www.nato.int/docu/pr/2003/p03-146e.htm>) is the primary source for past and current defense spending data for the NATO nations, including the United States. Sources of defense spending data for Japan, the Republic of Korea, and the GCC nations include U.S. embassies in these nations, recent national defense white papers (where available), and the International Institute for Strategic Studies' (IISS) *The Military Balance 2003-2004*.

For purposes of standardization and comparability, this Compendium presents defense spending figures using the NATO definition wherever possible. According to this approach, defense expenditures are defined as outlays made by national governments specifically to meet the needs of the armed forces. In this context, the term "national government" limits "defense expenditures" to those of central or federal governments, to the exclusion of state, provincial, local, or municipal authorities. Regardless of when payments are charged against the budget, defense expenditures for any given period include all payments made during that period. In cases where actual 2003 defense outlays are not available, final defense budget figures are substituted. War damage compensation, veterans' pensions, payments out of retirement accounts, and civil defense and stockpiling costs for industrial raw materials or semi-furnished products are not included in this definition of defense spending. Defense spending figures depicted in this Compendium for the United States are based on the NATO definition and therefore may differ somewhat from other U.S. defense spending figures provided to Congress or used within the Department of Defense. NATO's definition of defense spending includes spending on programs funded outside of the Department of Defense, namely, the Department of State's International Security Assistance Programs, and the defense-related portions of the Coast Guard and the Department of Energy.

GDP data for NATO members, Australia, the Republic of Korea, and Japan are taken from the Organization for Economic Cooperation and Development (OECD). GDP data for the GCC countries (which are not reported by OECD) are drawn from The Economist Intelligence Unit (EIU).

Multinational peace operations data includes a) 2003 funding contributions to UN peacekeeping operations and b) contributions of personnel (troops, military observers, and international police) to both UN and major non-UN peace operations as of November 2003. UN personnel contributions data have been obtained from the *December 2003 Monthly Troop Contributors List* prepared by the UN's Department of Peacekeeping Operations, while those for the NATO-led peace operations in Bosnia and Kosovo (i.e., SFOR and KFOR) are based upon data provided by the Department of Defense's Balkans Task Force. Funding data for UN peace operations have been obtained from the *Status of Contributions as at 31 December 2003* produced by the United Nations' Secretariat.

Combat forces data (ground, naval, and air) are based on information provided by nations under the Conventional Forces Europe (CFE) data exchange (for those forces limited

by CFE), supplemented with data from responses to NATO's *Defense Planning Questionnaire* (for those nations that participate in NATO's integrated defense planning process), open sources (such as *Jane's Defense* publications and magazines and IISS' *The Military Balance 2003-2004*), and DoD sources.

Ground combat capability data includes major combat systems, including tanks, artillery, and attack helicopters for army and marine units. Armored vehicles, anti-tank weapons, mortars, small arms, and transport and combat service support assets are not included in this assessment. The quantity and quality of nations' equipment holdings are assessed using widely accepted static measures.

Naval combat, and mine countermeasures tonnage data includes aircraft carriers, attack submarines (non-strategic), principal surface combatants (cruisers, destroyers, frigates, and larger corvettes), mine warfare ships and craft (including mine layers), and patrol combatant ships for the combat, strike and defense category.

Combat aircraft capability data includes fixed-wing combat aircraft (air force, naval, and marine assets) in the following categories: fighter/interceptor, fighter/bomber, conventional bomber, and tactical fighter reconnaissance aircraft (including combat-capable trainer and electronic warfare aircraft). Not included are maritime patrol aircraft (MPA), anti-submarine warfare (ASW) aircraft, transports, air-to-air refueling aircraft, or any support or special mission aircraft. The quantity and quality of nations' equipment holdings are assessed using widely accepted static measures.

Military Mobility and Logistics Forces data (naval, and air) are based on information provided by nations under the Conventional Forces Europe (CFE) data exchange (for those forces limited by CFE), supplemented with data from responses to NATO's *Defense Planning Questionnaire* (for those nations that participate in NATO's integrated defense planning process), open sources (such as *Jane's Defense* publications and IISS' *The Military Balance 2003-2004*), and DoD sources.

Naval supply, tender and transport tonnage includes amphibious warfare ships, various types of tenders, landing ships, tankers, transports, and other support ships.

Military transport aircraft capacity data includes military fixed wing transport aircraft (air force, army, marine, and naval assets) to include multi-role tanker/transport. Not included are transport aircraft with maximum payload capacity less than 12,000 lbs, aircraft identified as VIP transport, government-owned aircraft operated in civilian markings, and commercial aircraft available under contract or national legislation in a time of war or national emergency. Transport capacity is derived from number and model of aircraft multiplied by cargo capacity measured in short tons (maximum payload in pounds (lbs) (as stated in *Jane's All the Worlds Aircraft*) divided by 2,000).

Tanker aircraft fuel offload capacity data includes fixed wing air-to-air refueling aircraft (air force, naval, and marine assets) to include multi-role tanker/transport. Fuel offload capacity is derived from number and model of aircraft multiplied by maximum fuel offload capacity measured in pounds (lbs) at a mission radius of 1000 nautical miles.

NATO Major Equipment and R&D spending data portrays the percentage of NATO members' 2003 defense budgets that were devoted to major equipment procurement and research-and-development. These are derived from information contained in NATO's annual *Defense Planning Questionnaire*. Please note that this in prior Reports, this information was captured under the heading of 'Defense Modernization Spending.'

Cost sharing data have been obtained from U.S. embassies and DoD components, including the military departments and commands. DoD components also provide estimates of U.S. stationing costs by country. Cost sharing data and stationing cost estimates for a given year are collected by the Department during the spring of the following year, and are then evaluated and published as budget exhibits. The Department provides estimates for 2002 in this Compendium. A cost offset percentage cannot be calculated for Hungary, Bahrain, and the United Arab Emirates due to lack of information regarding U.S. stationing costs in those countries. Canada, the Czech Republic, France, the Netherlands, and Poland do not provide host nation support and are thus not included in this analysis.

Bilateral cost sharing is divided into two categories, according to whether the costs are borne by the host nation on-budget (direct cost sharing), or as imputed values of forgone revenues (indirect cost sharing). Direct cost sharing includes costs borne by host nations in support of stationed U.S. forces for rents on privately owned land and facilities, labor, utilities, and vicinity improvements. Indirect cost sharing includes forgone rents and revenues, including rents on government-owned land and facilities occupied or used by U.S. forces at no or reduced cost to the United States, and tax concessions or customs duties waived by the host nation.

Foreign assistance data have been obtained from the OECD. The OECD's Development Assistance Committee (DAC) encourages commitments of international aid, coordinated aid policies, and consistent aid reporting. The DAC's definition of official development assistance (ODA) is recognized as the international standard for reporting aid provided to developing countries and multilateral institutions. This is immensely useful, since "aid" is an extremely broad term, and encompasses many different types of assistance, which can make contributions from various nations very difficult to compare directly.

The OECD establishes economic and political conditions that nations must meet before receiving assistance (e.g., demonstrated commitment to political reform, and free and fair elections). Subsidies are provided in the form of trade and investment credits, grants, and loan guarantees, and are directed into areas such as food aid, medical supplies, and technical assistance in management training, privatization, bank and regulatory reform, environmental projects, market access/trade, nuclear reactor safety, and democratic institution building.

Aid to 12 of the 22 emerging economies of Central Europe (including the Czech Republic, Hungary, and Poland) and the New Independent States of the former Soviet Union (NIS) does not qualify as official development assistance for OECD purposes, but instead is categorized as official aid (OA). Both categories, ODA and OA, cover identical types of assistance, with the only difference being the recipient nations. Other OA recipient nations include more advanced developing countries (e.g., Kuwait, Qatar, and the United Arab Emirates). Recipient nations move from one aid category to the other depending on their development status. Total foreign assistance evaluated in this Compendium is the sum of all ODA and OA.

Foreign assistance data in this Compendium cover the period 1995 through 2002. At this time, complete and reliable foreign assistance data are available only through 2002 due to complexities and delays in the OECD collection and reporting process, and data are still not complete for some countries for 1995-1997. Assistance data are not available for the Czech Republic or Poland for years covered in this Compendium prior to 1998. This is to be expected since these nations, along with Hungary, are primarily recipients of foreign assistance. This is also the case with Bahrain, Oman, and Qatar, for which no foreign assistance contributions are reported.

## **E. SELECTED TABLES and GRAPHS**

**Table E-1**
**Defense Spending as a % of GDP vs. Per Capita GDP**

The following graph depicts our NATO and Pacific allies, and GCC security partners' willingness to commit resources to the common defense (defense spending as a percentage of GDP) relative to their ability to do so (per capita GDP). The Chart depicts the wide variations in 2003 per capita GDP (a widely accepted indicator of prosperity and standard of living) among the nations addressed in this Compendium – from under \$4,000 in Turkey to over \$55,000 in Luxembourg. Three main clusters of nations are apparent. The first cluster, which consists primarily of GCC nations, combines higher than average levels of defense spending with below average per capita incomes. The second cluster is made up of the new NATO members with developing economies. This group's defense spending as a percent of GDP is just below average, while their average per capita incomes are far below average. Finally, the third cluster includes most of our traditional Western European allies, who have average to slightly above-average per capita incomes, but below-average levels of defense spending.

**Defense Spending as a Percentage of GDP vs. Per Capita GDP  
2003**

## Table E-2

### Defense Spending Trends

This chart compares the United States' defense spending trend with those of our NATO and Pacific allies, and our GCC partners. To appreciate the impact of 9/11 on U.S. priorities, one should note that American defense spending declined by 2.6% from 1995 to 2001. This was the sixth largest decline of any nation covered in this Compendium, trailing only Belgium (05.8%), France (-4.5%), Canada and the UK (both - 3.1%), and Germany (-2.8%) (Refer to Table D-4 in the Annex for further information on defense spending trends). Operation Enduring Freedom produced a 10.9% jump in U.S. defense spending in 2001, and overall, the *War on Terror* has caused a 7.4% increase in American defense spending between 2002 and 2003 (and no less than 19.1% for the period 2001-2003). Overall non-U.S. NATO allied defense spending was virtually flat (-0.5%) during the 2002-2003 period, since two of the four European countries with the largest defense budgets registered negative growth: Germany (-1.6%) and Italy (-8.5%).

\*The Czech Republic, Hungary, and Poland are not included prior to their admission to NATO (1995-1998).

## Table E-3

### Bi-lateral Cost Sharing Contributions

In 2002 (the most recent year for which data are available) the United States received direct and indirect cost sharing assistance from our NATO, Pacific, and GCC allies that totaled about \$8.5 billion, an increase of approximately 14% over the preceding year.

#### U.S. Stationed Military Personnel & Bilateral Cost Sharing 2002 Dollars in Millions - 2002 Exchange Rates

**Table E-4****Multilateral Cost Sharing: NATO's Common-Funded Budgets**

NATO's common-funded budgets are among the Alliance's best tools for promoting responsibility-sharing equity since they reflect long-standing arrangements for sharing the costs of mutually beneficial infrastructure projects. The following table summarizes allied contributions to NATO's common-funded budgets, listing each country's contribution and the percentage of the total budget that represented.

**NATO's Common-Funded Budgets - 2003\***

**Table E-5**  
**U.S. Cost Offset Percentages**

This chart depicts the percentage of U.S. stationing costs that were offset by nations that hosted U.S. military forces in 2002. It credits nations both for direct payment of U.S. stationing costs (i.e., on-budget host country expenditures), and *indirect* cost sharing deferrals or waivers of taxes, fees, rents, and other charges (i.e., off-budget, forgone revenues). Overall, allied cost sharing during 2002 offset just over 50% of total U.S. stationing costs – which had increased by about 3% compared to costs in 2001. Cost sharing has historically been a particularly prominent aspect of our bilateral defense relationships with Japan and the Republic of Korea. During 2002, these two nations provided no less than 63% of total (direct and indirect) allied cost sharing contributions– and 90% of all direct cost sharing. Japan provided \$3.2 billion in direct cost sharing during 2002 – a full \$2.7 billion more than the second-largest contributor, South Korea. Our NATO allies collectively provided 28% of total cost sharing contributions during 2002, nearly all of which (97%) took the form of indirect contributions. Finally, our GCC security partners collectively provided just above 8% of total cost sharing contributions during the year.

**Share of U.S. Overseas Stationing Costs Paid by Selected Allies**
